

PRESS RELEASE

New Water Based Emulsion Polymer Manufacturing Plant in the Port of Rotterdam (Netherlands)

Rotterdam, The Netherlands, February 27, 2007

Organik Group – a fast growing specialty chemicals producer – is proud to announce that its Rotterdam Production Facilities is ready to start its test productions of selected water based emulsion polymers for various industrial applications. The new plant located in the Port of Rotterdam, will use highly automated inhouse engineered production technologies. Along with its state-of-the-art production technology and SHE standards, the plant will benefit from valuable co-siting opportunities that will also facilitate incoming and outgoing logistics activities.

The initial yearly production will progressively be increased in the coming years thanks to the flexible layout of the plant that may accomodate a much larger production capacity and a wider range of products to satisfy market demands.

Organik Group has already been providing a wide range of high quality products to numerous world-renowned customers throughout Europe from its Kemerburgaz (Turkey) plant. The new plant in the Netherlands will enable the Group to strenghten its commercial relations with already existing customers as well as to explore new partnerships in the region.

***About Organik Group:** Established in 1924, Organik Group is the producer and the distributor of specialty chemical products which are used in various industries including coating, paint, textiles, leather, automotives, adhesives, paper, and various other applications. The Group develops the technology of its own products which are delivered to customers in more than 50 countries. The headquarters are located in Istanbul, with production facilities in Balerna (TI), Switzerland and recently in Rotterdam, the Netherlands. For more information, please visit www.organikkimya.com*
